Mahmud Adegboyega

Fullstack Software Developer

+234 816 424 7735 | mahmud.adegboyega@gmail.com | Lagos, Nigeria | github.com/MahmudChiv

SUMMARY

Fullstack software developer with hands-on experience across frontend and backend development, building and shipping production-style applications with Node.js/Express, TypeScript, React/Next.js, MongoDB, PostgreSQL, and AWS. Comfortable working across the stack — from designing REST APIs and database schemas to building responsive UIs and integrating AI capabilities into real products. Currently deepening system design and DSA skills.

SKILLS

- Languages: JavaScript, TypeScript, Python
- Backend: Node.js, Express, NestJS, FastAPI, REST API design, Redis
- Frontend: React, Next.js
- Databases: MongoDB (Mongoose), PostgreSQL (Prisma, SQLModel), Supabase
- Cloud/DevOps: AWS (CDK, Lambda, DynamoDB, Cognito), Railway, GitHub Actions (CI/CD), Git/GitHub
- Other: Paystack, Twilio, GitHub API, AI/LLM APIs (Gemini, Groq, Bedrock), ElevenLabs (TTS)

EXPERIENCE

Software Engineer, Backend — HNG Internship *Remote | Apr 2026 – May 2026*

- Worked on backend features in a structured, cohort-based internship focused on real-world engineering practices.
- Collaborated with a distributed team using Git workflows, code review, and API design conventions.

Frontend Engineer — Swift Trust MFB *Abuja, Nigeria | Oct 2025 – Feb 2026*

- Built the bank's public landing page, giving new customers clear information about the bank's products and services.
- Implemented a responsive, accessible interface focused on clarity and conversion for first-time visitors.

PROJECTS

Yauwa AI — Voice-First WhatsApp Bookkeeping Assistant *(wa.me/14155238886)*

- Led a team of 4 as architecture lead and sole PR reviewer, building a WhatsApp bot that lets low-literacy Nigerian traders log sales, track stock, and manage restocking entirely by voice, replying in Nigerian Pidgin.
- Built the backend in Python/FastAPI with PostgreSQL (SQLModel), handling Twilio webhook-based WhatsApp integration and a self-hosted audio-reply endpoint.
- Built the voice pipeline: Gemini for transcription, Groq (gpt-oss-120b) for extraction and reply generation, and ElevenLabs for natural-sounding Pidgin/English speech replies.
- Set up CI/CD with GitHub Actions (lint and startup checks) and branch-protected PR review, deploying to Railway on merge to main.

ClarLink — Voice-First Artisan Marketplace

- Built a mobile-first web app (React, Supabase) connecting clients with nearby artisans: clients post jobs by voice, and AI (Gemini, Groq) turns them into structured listings.
- Designed the job lifecycle: in-app price negotiation, a three-wallet escrow flow (client, artisan, platform) with simulated payments and a 10% platform fee, and release on client confirmation.
- Designed a dispute flow using before/after image evidence to protect both clients and artisans from fraud.

TruMatch — AI-Powered Commitment Verification & Team Matching *(tru-match-frontend.vercel.app)*

- Built a fullstack platform that verifies developer commitment for hackathon/project team formation, replacing self-reported availability with data-backed signals.
- Scored GitHub activity (commit consistency, PR completion rate, issue close ratio) into a transparent Commitment Score, and integrated a Gemini AI interview flow that asks questions based on a user's actual GitHub patterns.
- Built end-to-end: GitHub OAuth, scoring engine, AI interview and matching logic, and the Next.js frontend.

EDUCATION

Federal University of Technology, Akure (FUTA)

B.Tech Software Engineering — Akure, Nigeria | 2024 – 2029
